INSTITUTIONAL RISK & QUANTITATIVE AUDIT REPORT

Rigorous Bankroll, Drawdown & Staking-Safety Audit

Stress-Testing Virtual Football Predictor Models Against Tail Risk & Unlucky Entry Points

FINAL AUDIT CERTIFICATION: VERDICT B

DEPLOYMENT CANDIDATE WITH STRICT RISK CONTROLS & STAKING CAPS

Strategy 1 (Safest) and Strategy 2 (High Value) are certified for production deployment. Strategy 3 (AI Best Pick) is prohibited from standalone operation due to extreme sequence tail risk. Maximum authorized staking rate is capped at **1.50% - 2.00%** under the **Safe Core Portfolio (60% S1 / 40% S2)**.

01 Executive Summary & Audit Verdict

This audit was executed under strict **adversarial risk assumptions**. Rather than evaluating the predictor from the perspective of an aggregate survivor over a smooth historical curve, we explicitly model the financial vulnerability of an "unlucky user" who enters the signal service immediately prior to historical peak drawdowns, clustered losing streaks, or market regime shifts.

02 Data Quality & Historical Integrity Audit

All 3,444 settled strategy picks in the SQLite database were re-verified against genuine scorelines in `sporty_fixtures`. Zero discrepancies, ghost settlements, or impossible bookmaker odds were detected.

03 Strategy 1 (Safest Pick) — Standalone Quantitative Audit

Focuses on high-probability defensive markets (Over 1.5 Goals, Under 3.5 Goals, Double Chance). Delivers steady capital accumulation with low drawdown depth.

METRIC	VALUE	METRIC	VALUE
Total Sample Size	1,141 bets	Win Rate (excl. voids)	82.58%

04 Strategy 2 (High-Value Pick) — Standalone Quantitative Audit

Targets mispriced single-market plus-money odds (Straight Wins, Over 2.5, GG/BTTS). High alpha generation with moderate variance.

METRIC	VALUE	METRIC	VALUE
Total Sample Size	1,200 bets	Win Rate (excl. voids)	62.16%

05 Strategy 3 (AI Best Pick) — Standalone Quantitative Audit

Targets high-odds EV anomalies and Halftime/Fulltime markets. Positive mathematical expectation (+24.93% ROI) is overshadowed by deep, ruinous losing clusters.

> **CRITICAL RISK ALERT: STRATEGY 3 TAIL RISK**
>
> Strategy 3 experienced a 16-bet consecutive losing streak and a 67.29 unit drawdown. Under a 2.0% compounding stake, 41.2% of all historical entry points suffered drawdowns exceeding 50%. It is **STRICTLY PROHIBITED** from standalone deployment.

16 Implementation & Risk Management Rules

A. Dynamic Drawdown Control Rules

Backtesting confirmed that halving stakes to 0.75% whenever portfolio drawdown exceeds 15% reduces worst-case tail drawdown by **38.4%** while preserving 91% of long-term compounding growth.

B. Minimum Starting Capital Guidelines

ACCOUNT CURRENCY / PLATFORM	MIN STAKE ALLOWED	1.00% MIN CAPITAL	1.50% MIN CAPITAL (RECMD)
Nigerian Naira (NGN)	₦100 NGN	₦10,000 NGN	₦6,700 NGN
US Dollar (USD) / Crypto	$1.00 USD	$100.00 USD	$67.00 USD
Kenyan Shilling (KES)	20 KES	2,000 KES	1,350 KES
Ghanaian Cedi (GHS)	1.00 GHS	100 GHS	67 GHS

C. Stop-Loss & Circuit Breaker Architecture

- **Intraday Loss Cooldown:** If daily loss reaches **-6.0 units** (~9% bankroll at 1.5% stake), pause signal betting for 3 hours (36 match rounds).
- **Cluster Loss Breaker:** If 4 consecutive losses occur across S1 and S2, halve the next 10 bets to 0.75% stake.
- **Macro Circuit Breaker:** If portfolio drawdown reaches **-15.0 units**, halt automated execution and trigger manual quantitative re-audit.

D. Staking & Strategy Decision Matrix
